Storytelling and the Future of Organizations David M. Boje 2011-04-26 Storytelling is part of social action and interaction that actually shapes the future of organizations. Organization and management studies have overwhelmingly focused to date on rational narrative structures with beginnings, middles, and ends, where narrative has proved to be a handy concept in qualitative studies. Far less attention is given however to the more spontaneous and 'non-staged' storytelling that occurs in organizations. Storytelling and the Future of Organizations explores the science and practice of 'antenarrative' because that is how the future of organization is shaped. Antenarrative is a term invented by David M. Boje in 2001, and is defined as a 'bet on the future,' as 'before' narrative linearity, coherence, and stability sets in. Antenarrative is all about 'prospective sensemaking,' betting on the future before narrative retrospection fossilizes the past. Antenarrative storytelling is therefore agential in ways that traditional narratology has yet to come to grips with. This handbook contribution is bringing together a decade of scholarship on 'antenarrative.' It is the first volume to offer such a varied but systematic examination of non-traditional narrative inquiry in the management realm, organizing and developing its approach, and providing new insights for management students and scholars.

PG Textbook of Pediatrics Piyush Gupta 2015-08-31 The book attempts to provide the essential information that postgraduates throughout India need to capture to effectively address the health problems that our children and youth may face in the times to come. Our objective is to be comprehensive yet concise and reader friendly, embracing both the new advances in science as well as the time-honored art of pediatric practice. Both Indian and international experts in respective fields have provided the details which have been further scrutinized for exposition and usefulness to pediatric postgraduates by a chosen team of eminent academicians. We have liberally included tables, line diagrams, images, clinical photographs, illustrative figures, flowcharts and algorithms in the main text. The book is divided in 10 major Parts and further arranged into 51 Sections to cover all aspects of postgraduate pediatric curriculum. Themes which have major public health relevance for India are extensively covered. International Perspectives on Teaching Rival Histories Henrik Åström Elmersjö 2017-04-04 This book presents a survey of approaches to dealing with 'rival histories' in the classroom, arguing that approaching this problem requires great sensitivity to differing national, educational and narrative contexts. Contested narratives and disputed histories have long been an important issue in history-teaching all over the world, and have even been described as the 'history' or 'culture' wars. In this book, authors from across the globe ponder the question "what can teachers do (and what are they doing) to address conflicting narratives of the same past?", and puts an epistemological issue at the heart of the discussion: what does it mean for the epistemology of history, if it is possible to teach more than one narrative? Divided into three sections that deal with historical cultures, multicultural societies and multiperspectivity, the chapters of the book showcase that dealing with rival histories is very much dependent on context, and that diverse teaching traditions and societal debates mean that teachers' abilities in engaging with the teaching of rival narratives are very different. The volume will be compelling reading for students and researchers in the fields of education, history, sociology and philosophy, as well as practising teachers.

An Intellectual History of School Leadership Practice and Research Helen M. Gunter 2016-01-28 An Intellectual History of School Leadership Practice and Research presents a detailed and critical account of the ideas that underpin the practice of educational leadership, through drawing on over 20 years of research into those who generate, popularise and use those ideas. It moves from abstracted accounts of knowledge claims based on studying field outputs, towards the biographies and practices of those actively involved in the production and use of field knowledge. The book presents a critical account of the ideas underpinning educational leadership, and engages with those ideas by examining the origins, development and use of conceptual frameworks and models of best practice. It deploys an original approach to the design and composition of an intellectual history, and as such it speaks to a wider audience of scholars who are interested in developing and deploying such approaches in their particular fields.

Fitting The Task To The Human, Fifth Edition E. Grandjean 1997-07-31 Our working conditions have undergone rapid and fundamental changes during the last few years. One example is the widespread use of the individual computer in the shop, office and home. Another major development is that women now hold many jobs that used to be in the male domain, and that many more women choose a life-long occupational career. Workforces, tasks, conditions and tools are changing. Many office and industrial workers are tied to human-machine systems. Repetitive work can create cumulative health problems such as the often reported visual strains, mental stress and physical injury. Proper ergonomic measures can avoid such harmful effects and instead promote health conditions which are both efficient and agreeable. In this latest edition of *Fitting the Task to the Human*, Professor Karl Kroemer has revised and updated the text and data while remaining true to the spirit of Professor Etienne Grandjean's earlier editions. This aim is, as before, to impart basic knowledge of occupational ergonomics in a straightforward and lucid fashion to those responsible for the design, management and safety of people in the workplace, and to those who study it.
