**Unmanned Aircraft Design** Mohammad Sadraey 2022-05-31 This book provides fundamental principles, design procedures, and design tools for unmanned aerial vehicles (UAVs) with three sections focusing on vehicle design, autopilot design, and ground system design. The design of manned aircraft and the design of UAVs have some similarities and some differences. They include the design process, constraints (e.g., g-load, pressurization), and UAV main components (autopilot, ground station, communication, sensors, and payload). A UAV designer must be aware of the latest UAV developments; current technologies; know lessons learned from past failures; and they should appreciate the breadth of UAV design options. The contribution of unmanned aircraft continues to expand every day and over 20 countries are developing and employing UAVs for both military and scientific purposes. A UAV system is much more than a reusable air vehicle or vehicles. UAVs are air vehicles, they fly like airplanes and operate in an airplane environment. They are designed like air vehicles; they have to meet flight critical air vehicle requirements. A designer needs to know how to integrate complex, multi-disciplinary systems, and to understand the environment, the requirements and the design challenges and this book is an excellent overview of the fundamentals from an engineering perspective. **Optimization Theory and Applications** Jochen Werner 1984 This book is a slightly augmented version of a set of lectures on optimization which I held at the University of Gottingen in the winter semester 1983/84. The lectures were intended to give an introduction to the foundations and an impression of the applications of optimization theory. Since in finite dimensional problems were also to be treated and one could only assume a minimal knowledge of functional analysis, the necessary tools from functional analysis were almost completely developed during the course of the semester. The most important aspects of the course are the duality theory for convex programming and necessary optimality conditions for nonlinear optimization problems; here we strive to make the geometric background particularly clear. For lack of time and space we were not able to go into several important problems in optimization - e. g. vector optimization, geometric programming and stability theory. I am very grateful to various people for their help in producing this text. R. Schaback encouraged me to publish my lectures and put me in touch with the Vieweg-Verlag. W. BrÜbach and O. Herbst proofread the manuscript; the latter also produced the drawings and assembled the index. I am indebted to W. LÜck for valuable suggestions for improvement. I am also particularly grateful to R. Switzer, who translated the German text into English. Finally I wish to thank Frau P. Trapp for her care and patience in typing the final version.

Divan-i Kebir Mevlana Jelaleddin Rumi 2013-10-02 Nach dem überwältigenden und lebensverändernden Treffen mit Schams von Täbris liess der grosse Mystiker und Dichter Jelaladdin Rumi viele Gebote der formalen Religionen los. Er bestand darauf, dass nur eine vollständige persönliche Auflösung in die grösseren Kräfte von Gott dem Herzen die Befriedigung geben kann, die es so sehr sucht. Er begann, spontan Gedichte vorzutragen, die von seinen Anhängern schriftlich festgehalten wurden. So wurden mehr als 44.000 Verse in 23 Bänden zusammengetragen, die gesamthaft Divan-i Kebir genannt werden. Das letzte Band hat eindeutig ketzerische Inhalte; diese Gedichtsammlung ist in drei Abschnitte unterteilt: Lieder an Schams und an Gott, Lieder des Ratschlags und der Ermahnung und schliesslich Lieder der Ketzerei. Damit unser Bewusstsein verwandelt wird - so Rumi - müssen wir unsere tief verwurzelten Gewohnheiten gehen lassen und neue annehmen. Kurzum, wir müssen Ketzer werden. Das vorliegende Werk erscheint in der Edition Shershir vorweg als Band 23 des Divan-i Kebir von Jelaladdin Rumi. Die ersten 22 Bände werden in den nächsten Jahren ebenfalls in der Edition Shershir erscheinen.
