The New Advisor Guidebook Pat Folsom 2015-09-21 This is an exciting time to be an academic advisor—a time in which global recognition of the importance of advising is growing, research affirms the critical role advising plays in student success, and institutions of higher education increasingly view advising as integral to their missions and essential for improving the quality of students' educational experiences. It is essential that advisors provide knowledgeable, realistic counsel to the students in their charge. The New Advisor Guidebook helps advisors meet this challenge. The first and final chapters of the book identify the knowledge and skills advisors must master. These chapters present frameworks for setting and benchmarking self-development goals and for creating self-development plans. Each of the chapters in between focuses on foundational content: the basic terms, concepts, information, and skills advisors must learn in their first year and upon which they will build over the lengths of their careers. These chapters include strategies, questions, guidelines, examples, and case studies that give advisors the tools to apply this content in their work with students, from demonstrations of how student development theories might play out in advising sessions to questions advisors can ask to become aware of their biases and avoid making assumptions about students to a checklist for improving listening, interviewing, and referral skills. The book covers various ways in which advising is delivered: one-to-one, in groups, and online. The New Advisor Guidebook serves as an introduction to what advisors must know to do their jobs effectively. It pairs with Academic Advising Approaches: Strategies That Teach Students to Make the Most of College, also from NACADA, which presents the delivery strategies successful advisors can use to help students make the most of their college experience.

Dorn 2014-04-04 Assessing Expressive Learning is the only book in the art education field to date to propose and support a research-supported teacher-directed authentic assessment model for evaluating K-12 studio art, and to offer practical information on how to implement the model. This practical text for developing visual arts assessment for grades 1-12 is based on and supported by the results of a year-long research effort primarily sponsored by the National Endowment for the Arts, involving 70 art teachers and 1,500 students in 12 school districts in Florida, Indiana, and Illinois. The purpose of the study was to demonstrate that creative artwork by K-12 students can be empirically assessed using quantitative measures that are consistent with the philosophical assumptions of authentic learning and with the means and ends of art, and that these measures can reliably assess student art growth. A further goal was to provide a rationale for the assessment of student art as an essential part of the K-12 instructional program and to encourage art teachers to take responsibility for and assume a leadership role in the assessment of art learning in the school and the school district. Assessing Expressive Learning: *reports on current assessment methods but also stresses a time-tested portfolio assessment process that can be used or adapted for use in any K-12 art classroom; *includes the assessment instruments used in the study and several case studies of art teachers using electronic portfolios of student work, a bibliography of major art assessment efforts, and a critical review of current methods; *is designed to be teacher- and system-friendly, unlike many other art assessment publications that provide only a review of information on assessment; and *both documents an experiment where artistic values and aesthetic issues were considered paramount in the education of K-12 students in the visual arts, and also serves as a guide for the conduct of similar experiments by art teachers in the nation's schools—the research methodology and results are reported in an appendix in a format that will enable educational researchers to duplicate the study. This volume is ideal as a text for upper-division undergraduate and graduate classes in visual arts education assessment, and highly relevant for college art education professors, researchers, and school district personnel involved in the education and supervision of art teachers, and researchers interested in performance measurement.

Engaging Minds in Science and Math Classrooms Eric Brunzell 2014-02-25 "We decide, every day, whether we are going to turn students on or off to science and mathematics in our classrooms." Daily decisions about how to incorporate creativity, choice, and autonomy—integral components of engagement—can build students' self-efficacy, keep them motivated, and strengthen their identities as scientists and mathematicians. In this book, Eric Brunzell and Michelle A. Fleming show you how to apply the joyful learning framework introduced in *Engaging Minds in the Classroom* to instruction in science and mathematics. Acknowledging that many students—particularly girls and students of color—do not see themselves as mathematicians and scientists, the authors provide a series of suggested activities that are aligned with standards and high expectations to engage and motivate all learners. Given the current focus on encouraging students to pursue science, technology, engineering, and mathematics (STEM) studies, this book is a welcome addition to every teacher's reference collection. Eric Brunzell is a former high school science teacher and is now associate professor of science education at the University of Wisconsin Oshkosh. Michelle A. Fleming is a former elementary and middle school teacher and is now assistant professor of science and mathematics education at Wright State University in Dayton, Ohio.
