Advances in Near Infrared Spectroscopy and Related Computational Methods Christian Huck 2020-01-03 In the last few decades, near-infrared (NIR) spectroscopy has distinguished itself as one of the most rapidly advancing spectroscopic techniques. Mainly known as an analytical tool useful for sample characterization and content quantification, NIR spectroscopy is essential in various other fields, e.g. NIR imaging techniques in biophotonics, medical applications or used for characterization of food products. Its contribution in basic science and physical chemistry should be noted as well, e.g. in exploration of the nature of molecular vibrations or intermolecular interactions. One of the current development trends involves the miniaturization and simplification of instrumentation, creating prospects for the spread of NIR spectrometers at a consumer level in the form of smartphone attachments—a breakthrough not yet accomplished by any other analytical technique. A growing diversity in the related methods and applications has led to a dispersion of these contributions among disparate scientific communities. The aim of this Special Issue was to bring together the communities that may perceive NIR spectroscopy from different perspectives. It resulted in 30 contributions presenting the latest advances in the methodologies essential in near-infrared spectroscopy in a variety of applications.

Government Contracting William Sims Curry 2022-12-30 Through three comprehensive editions, Government Contracting: Ethical Promises and Perils in Public Procurement has been lauded for exposing fraud, incompetence, waste, and abuse (FIWA) and analyzing corruption, mismanagement, and ineptitude that defile government contracting. The first two editions thoroughly outlined procurement throughout the contracting cycle including initial planning, evaluating proposals, contractor selection, contract administration, contract closeout, and auditing. They further provided much-needed guidance on contracting documents, management tools, and processes for addressing negative influences on government contracting. This third edition incorporates the results of a new nationwide study into best public procurement practice, as well as recent examples of real-world procurement fraud cases, offering recommendations for procurement practices to deter fraud. Public procurement tools such as requests for proposals, pro forma contracts, proposal evaluation forms, sole source justification and approval forms, and other useful tools including PowerPoint presentations are provided on a website to accompany the book. This textbook is aimed at postgraduate students and academics working in the fields of public administration, policy and procurement, along with public procurement professionals.
