The Psychology of Physical AttractionAn Swami 2008 This book begins the task of providing a scientific look at physical attraction by presenting an overview of scholarly work on physical beauty, culture, evolution, and other aspects of human attractiveness. It begins by discussing the role of evolution in the development of beauty. It means to be "attractive" in contemporary society. It provides a general overview of evolutionary psychology and mate choice, as well as an in-depth focus on characteristics such as physical symmetry, body weight, and ratios, and youthfulness. It goes on to explore the role of societal and cultural ideals of beauty through a discussion of the social psychology of human beauty. Finally, the "morality" of physical attractiveness is examined, looking at issues such as discrimination on the basis of looks, body image and eating disorders, and cosmetic surgery.

[What Makes Your Brain Happy and Why You Should Do the Opposite](#) David Disalvo 2011-11-15 This book reveals a remarkable paradox: what your brain wants is frequently not what your brain needs. In fact, much of what makes our brains "happy" leads to errors, biases, and distortions, which make getting out of our own heads extremely difficult. Author David DiSalvo presents evidence from evolutionary and social psychology, cognitive science, neurology, and even marketing and economics. And he interviews many of the top thinkers in psychology and neuroscience today. From this research-based platform, DiSalvo draws out insights that we can use to identify our brains' foibles and turn our awareness into edifying action. Ultimately, he argues, the research does not serve up ready-made answers, but provides actionable clues for overcoming the plight of our advanced brains and, consequently, living more fulfilled lives.

Psychology for LivingKaren Grover Duffy 2001 Focusing on classical oligopoly theory from 1840-1940, this volume uses topology and numerics to reconsider work of early oligopoly researchers in the light of modern dynamics. It resuscitates some of the field's original ideas after decades of oblivion.

The Yes FactorTonya Reiman 2010-04-29 The premier guide to combining verbal and nonverbal communication to gain confidence, establish credibility and make lasting impressions Yes—a small word, but the key to opening doors both professional and personal. The power of The Yes Factor gets you the job, the promotion, the second date. But getting a "yes" can be tricky. Tonya Reiman explains how communication works—what the words you speak actually say about you, and how to deliver the perfect pitch can help you achieve your goals, convince your boss or client you should get the account, give a killer presentation, or win control of the remote (without picking off your spouse!). Combining verbal and nonverbal tricks—identifying types of communicators, recognizing subconscious motivations, and adopting covert communication techniques—The Yes Factor is a simple approach to influencing and framing communication so that your message resounds clearly, ensuring that your ideas are implemented effectively and that you present your best possible self. A leading body language expert and Fox News contributor, Reiman's accessible practical first-hand anecdotes, step-by-step advice, sidebars, diagrams, and short quizzes make The Yes Factor the ultimate how-to for exuding confidence, establishing authority, and gaining credibility, and making the lasting impression that will get you a "yes" everytime. [Do Gentlemen Really Prefer Blondes?](#) Jena Pincott 2008 "Q- Do Gentlemen Really Prefer Blondes? A- Marilyn Monroe, Scarlet Johansson and Gwyneth Paltrow would be happy to know that they do. During the Ice Age, when even cavemen were in short supply, the blonde woman really did get her man - simply because her light coloured hair made her stand out. Plus scientists have recently discovered that natural blondes have higher oestrogen levels. In short, golden (preferably long) hair shouts - 'I am young, sexy - and fertile' to every member of the male species within a few miles. Q- When s the best time to seduce my man? A- Your other half will definitely get more possessive and more attracted to you when you re ovulating and at your most fertile. You ll spend time on your make-up and choose next day before you go to bed. Your lips will be fuller, and your skin will be radiant because of the high levels of oestrogen being pumped through your blood. But don't get carried away by how sexy you feel. You are also more likely to be unfaithful during this period and your boyfriend is also likely to run away with another equally attractive member of the female species. Q- How do I get him to change his wild lifestyle? A- Get pregnant.

[Why Men Don't Listen and Women Can't Read Maps](#) Allan Pease 2001-06-19 Have you ever wished your partner came with an instruction booklet? This international bestseller is the answer to all the things you've ever wondered about the opposite sex. For their controversial new book on the differences between the way men and women think and communicate, Barbara and Allan Pease spent three years traveling around the world, collecting the dramatic findings of new research on the brain. Investigating evolutionary biology, analyzing psychologists, studying social changes, and annoying the locals. The result is a sometimes shocking, always illuminating and frequently hilarious look at where the battle line is drawn between the sexes, why it was drawn, and how to cross it. Read this book and understand--at last--why men never listen, why women can't read maps, and why learning each other's secrets means you'll never have to say sorry again.

The Culture of Corporeality Stefan Leonhard Brandt 2007 The Culture of Corporeality outlines a cultural history of the body in the American postwar years (1945-1960), based on contemporary critical theory and exemplified by a variety of films, literary works, and other documents. The book argues that the body, like language, is cultural, symbolic, and >lived

Was Ihr Gehirn glücklich macht ... und warum Sie genau das Gegenteil tun David DiSalvo 2014-05-28 Warum wir uns so oft selbst im Weg stehen Warum

treffen wir immer wieder Entscheidungen, die unseren Bedürfnissen eigentlich zuwiderlaufen und unsere langfristigen Ziele gefährden? Warum setzen wir uns bei Versuchungen aus, die wir besser meiden sollten? Warum neigen wir dazu, statistisch völlig normalen Ereignissen eine höhere Bedeutung zuzuschreiben? Und warum beharren wir darauf, recht zu haben, wenn doch alles für das Gegenteil spricht? David DiSalvo enthüllt ein bemerkenswertes Paradox: Was unser Gehirn will, ist oft nicht das, was unser Gehirn braucht. Tatsächlich beruht vieles, was unser Gehirn „glücklich“ macht, auf Voreingenommenheiten und Verzerrungen, die in eine regelrechte Selbst-Sabotage münden können. Aber warum ist das so? Und können wir daran etwas ändern? Antworten auf diese Fragen findet der Autor in der Evolutions- und Sozialpsychologie, der Kognitionswissenschaft und Hirnforschung wie auch in Marketing und Wirtschaftswissenschaft. Und er setzt uns in die Lage, die Schwächen unseres Gehirns zu erkennen. Die Forschung, sagt DiSalvo, liefert zwar keine Patentlösungen, aber wertvolle Hinweise, wie wir unser Denkgorgan überfordern und so ein erfüllteres Leben führen können. David DiSalvo nimmt seine Leser mit auf eine Rundreise zu all den Täuschungen, denen unser Geist unterliegt. Kein Aspekt des täglichen Lebens bleibt unberücksichtigt, vom Vorstellungsgespräch über das erste Date bis zu den Gefahren von eBay ... ein kurzweiliger Leitfaden über die Möglichkeiten, die Ihr Leben verändern könnte. New Scientist Dieses Buch ist das Schweizer Messer der Psychologie und Neurowissenschaft – handlich, praktisch und sehr, sehr nützlich. Joseph T. Fish and Fritz Wolfgang Koydl 2010-09-08 Ein Leben unter Engländern kann ziemlich abenteuerlich sein. Zumindest, wenn man als Korrespondent einen Nachruf auf die Queen verfassen soll - für den Fall der Fälle - und sich vornimmt, ihr wenigstens einmal leibhaftig zu begegnen. Bei seinen Bemühungen trifft Wolfgang Koydl auf Hofschranzen und Sargschreiner, auf Feudalherren und andere Exzentriker - und lotet dabei die Tiefen der britischen Seele aus. Nebenbei versuchen die Koydls sich fremden Alltag zurechtzufinden und stolpern dabei in so manchen "clash of cultures". Die wunderbar komische Geschichte einer deutschen Familie in England, mit Wärme, Witz und Feinsinn erzählt.

The Age of Scientific Sexism Mari Ruti 2015-07-30 We trust our sciences to operate on a plane of objectivity and fact in a world of subjectivity and cultural ideology, but should we? In The Age of Scientific Sexism, philosopher Mari Ruti offers a sharp critique of the gender profiling tendencies of evolutionary psychology, untangling the insidious threads of various gender mythologies that have infiltrated-or perhaps even define-this faux-science. Selling stereotypes as scientific facts, evolutionary psychology continually brings retrograde models of sexuality into mainstream culture: it insists that men and women live in two completely different psychological, emotional, and sexual universes, and that they will consequently always be locked in a vicious battle of the sexes. Among these regressive arguments is the assumption that men's sexuality is urgent and indiscriminate, whereas women are "naturally" reluctant, reticent, and choosy-a concept constructed to justify masculine behavior such as cheating, that women have historically found painful. On its most basic level, The Age of Scientific Sexism explores our impulse to "explain" romantic behavior through science: in the increasingly egalitarian gender landscape of our society, why are we so eager to embrace the rampant gender profiling that evolutionary psychology promotes? Perhaps these simplistic gender caricatures owe their popularity, at least in part, to our overly pragmatic society pragmatic society, which encourages us to search for easy answers to complex questions.

Body Politics and the Fictional Double Debra Walker King 2000 In recent years, questions concerning "the body" and its place in postmodern discourses have taken center stage in academic disciplines. Body Politics joins these discussions by focusing on the challenges women face when their externally defined identities and representations as bodies--their body fictions--speak louder than what they know to be their true selves. Racialized, gendered, or homophobic body fictions disfigure individuals by placing them beneath a veil of invisibility and by political, emotional, or spiritual suffocation. As objects of interpretation, "female bodies" in search of health care, legal assistance, professional respect, identity confirmation, and financial security must first confront their fictionalized doubles in a collision that, in many cases, ends in disappointment, distress, and even suicide. The contributors reflect on women's day-to-day lives and the cultural productions (literature, MTV, film) that give body fictions their power and influence. By exploring how these fictions are manipulated politically, expressively, and communally, they offer reinterpretations that challenge the fictional double while theorizing the discursive and performative forms it takes. Contributors include Trudier Harris, Maude Hines, S. Yumiko Hulvey, Debra Walker King, Sue V. Rosser, Stephanie A. Smith, Maureen Turim, Caroline Vercoe, Gloria Wade-Gayles, and Rosemary Weatherston.

Why Beautiful People Have More Daughters S. Miller 2007 An analysis of the ways in which evolution shapes human behavior and human lives draws on the findings of evolutionary psychology to offer revealing glimpses of human nature and to shed new light on why humans do the things that they do.

Neustart im Kopf Norman Doidge 2014-02-13 Unser Gehirn ist nicht - wie lange angenommen - eine unveränderliche Hardware. Es kann sich vielmehr auf verblüffende Weise umgestalten und sogar selbst reparieren. Norman Doidge verbindet faszinierende Einblicke in die neueste Forschung mit aufsehenerregenden Beispielen aus der Praxis: etwa eine Frau, deren eine Hirnhälfte die Funktionen eines ganzen Gehirns übernahm. Oder der Mann, dessen Gehirn nach einem Schlaganfall die Hirnströme in gesunde Hirnregionen „umleitete“ und seinem gelähmten Arm die Bewegungsfähigkeit zurückgibt. All dies ermöglicht unser Gehirn, die Welt stärker und anpassungsfähiger ist, als wir je dachten.

Handbook on Evolution and Society Alexandra Maryanski 2015-11-17 "Handbook on Evolution and Society" brings together original chapters by prominent scholars who have been instrumental in the revival of evolutionary theorizing and research in the social sciences over the last twenty-five years. Previously unpublished chapters provide up-to-date, critical surveys of recent research and key debates. The contributors discuss early challenges posed by sociobiology, the rise of evolutionary psychology, the more conflicted response of evolutionary sociology to sociobiology, and evolutionary psychology. Chapters address the application and limitation of Darwinian ideas in the social sciences. Prominent authors come from a variety of disciplines in ecology, biology, primatology, psychology, sociology, and the human sciences. The most comprehensive resource available, this vital collection demonstrates to scholars and students the new ways in which evolutionary approaches, ultimately derived from biology, are influencing the diverse social sciences and humanities.

Rasse, Evolution und Verhalten Philippe Rushton 2005 Von "Rassen" zu sprechen, gilt heute als anstößig, doch macht nicht nur der Blick auf die Ergebnisse in manchen Leistungssportarten deutlich, daß es genetische Unterschiede zwischen verschiedenen Großgruppen der Menschheit gibt: Auch die Medizin kommt nicht ohne umhin, solche Unterschiede zu berücksichtigen. So wurden in den USA kürzlich die ersten, speziell für Afro-Amerikaner geeigneten Medikamente zugelassen. Brisant ist aber ist freilich die Frage, in welchen Bereichen menschlichen Lebens solche statistischen Unterschiede wissenschaftlich fundiert festgestellt werden können und welche Ursachen - kulturelle oder biologische - sie haben. Sind sie zufällig entstanden oder erfüllen sie eine sinnvolle Aufgabe? Letztlich und vor allem muß die Frage beantwortet werden, welche möglichen Schlußfolgerungen aus diesen Erkenntnissen zu ziehen sind. In seinem Werk liefert Philippe Rushton von der University of Western Ontario einerseits eine Beschreibung der wichtigsten Unterschiede zwischen den drei menschlichen Großrassen und andererseits eine kohärente, gut untermauerte Theorie über die möglichen Entstehungsursachen dieser Unterschiede, die er in der Jahrzehntausende alten Evolutionsgeschichte des modernen Menschen zu finden meint. Rushton analysiert die Literatur zum Thema und schöpft dabei aus dem Fundus der verschiedensten Disziplinen - von der Psychologie, Soziologie

Verhaltensforschung bis zur Genetik (mit über 1.000 Verweisen auf die Fachliteratur). Er beschreibt auch die eigenen Forschungen und kommt zum Schluß, daß Schwarze, Weiße und Asiaten in bezug auf mindestens 60 verschiedene Variablen unterscheiden. Diese Unterschiede sind keine zufälligen, sondern bilden ein Muster. Weit davon entfernt, "alles auf die Biologie" zu reduzieren, argumentiert Rushton, daß man erstens durch ausschließliche Umwelttheorien nicht alle Rassenunterschiede erklären kann, daß zweitens das oben beschriebene dreigliedrige Muster mit seinen wechselseitigen Ausgleichen durch Umwelttheorien nicht plausibel gerechtfertigt werden kann, durch evolutionsbiologische Theorien aber logisch erklärbar ist, und daß drittens scheinbare Umwelteffekte auch durch genetische Effekte verursacht werden können ("genetisch-kulturelle Koevolution"). Brisant und hochaktuell: Ein wissenschaftliches Sachbuch, das Kontroversen auslösen wird!

Do Chocolate Lovers Have Sweeter Babies? Jena Pincott 2012-12-15 Jena Pincott writes about the quirky, under-the-radar side of science and, while pregnant, found herself wondering how her baby's gestation might tinker with her body - and how her body was shaping the future development of her unborn child. She started asking questions that her doctors couldn't always answer and uncovered unexpected answers in scientific journals. Why do thinner women have more daughters? What do fetuses actually learn when they eavesdrop? How does Grandma's diet affect her unborn grandchild? Drawing on her scientific background Jena Pincott writes about the hidden science of pregnancy. Here is a fascinating supplement to the typical maternity guide, delving into biology, neuroscience, evolutionary psychology and epigenetics, **Do Chocolate Lovers Have Sweeter Babies** gives a deeper understanding to what is physically, and psychologically, happening to a woman during pregnancy. Where does the maternal instinct come from? Does stress sharpen your baby's mind - or dull it? What mind control chemicals are in breast milk, sweat, and tears? It will satisfy every pregnant woman's curiosity about life's most mysterious process through the newest, most interesting and, sometimes, controversial discoveries being made by science.
