Industrialisation and Society Neil Tonge 1993 Targeted specifically at A-Level students, the Challenging History series provides a continuation from the GCSE approach, whilst also taking into account changes in the A-Level syllabus and historical research. By closely examining documentary evidence and posing questions, the six books in the series provide accessible guides to history from the 15th century onwards. Each chapter in the books is divided into four sections - preview, text, examining evidence and focus. The preview section is a presentation designed to arouse students' interest and to lay out the major themes of the chapter. The text sections contain a narrative of the period. The examining evidence sections present the student with a wide variety of historical sources and the focus section highlights particular events, people and issues of the period. Talking points scattered throughout the books encourage students to question their preconceptions and test ideas. There are also questions in every chapter, which invite the students to discuss the issues and present written responses.

Gender, Work and Wages in Industrial Revolution Britain Joyce Burnette 2008-04-17 A major study of the role of women in the labour market of Industrial Revolution Britain. It is well known that men and women usually worked in different occupations, and that women earned lower wages than men. These differences are usually attributed to custom but Joyce Burnette here demonstrates instead that gender differences in occupations and wages were instead largely driven by market forces. Her findings reveal that rather than harming women competition actually helped them by eroding the power that male workers needed to restrict female employment and minimising the gender wage gap by sorting women into the least strength-intensive occupations. Where the strength requirements of an occupation made women less productive than men, occupational segregation maximised both economic efficiency and female incomes. She shows that women's wages were then market wages rather than customary and the gender wage gap resulted from actual differences in productivity.
