A Question of Worth Chris Steed 2016-09-14 We live in a world that has become a resource, a world conditioned by the progressive domination of a monetary scale applied across the board. Our value and worth are contingent upon what we earn, on what we own. Amidst the increasing financialisation that characterises much of the globe, the prevailing ethos is that the only values we can usefully measure are those that can be quantified and expressed in terms of economics. Yet economic value and the value of the human are closely connected: erode the economic and you erode the personal. In the global economic crash of recent years it has been people who have been under assault not just financial value. The vulnerability of a society shaped solely by economic and monetised transactions is exposed when the economy and the monetisation of everything fails. When the economic machine seizes up, it is people who are devalued and dumped. Drawing upon his experience in government, education and the Church, the author asks: Must we be a market society as well as a market economy? Can we devise a non-economic account of describing human value and worth? Christopher Steed argues that the really important issues that frame the contemporary human situation are those that cannot be measured. Quality is also vital to human flourishing: what, after all, is wealth for? In this timely and important work, the author calls for a wider concept of value – one that encompasses both economic value and human value – and for a society that cultivates the importance of the human.

Count Girls In Karen Panetta 2018-08-01 To succeed in science and tech fields today, girls don't have to change who they are. A girl who combines her natural talents, interests, and dreams with STEM skills has a greater shot at a career she loves and a salary she deserves. The authors present compelling research in a conversational, accessible style and provide specific advice and takeaways for each stage of schooling from elementary school through college, followed by comprehensive STEM resources. This isn't a book about raising competitive, test-acing girls in lab coats; this is about raising happy, confident girls who realize the world of opportunities before them.

The Counterintelligence Chronology Edward Mickolus 2015-09-15 Spying in the United States began during the Revolutionary War, with George Washington as the first director of American intelligence and Benedict Arnold as the first turncoat. The history of American espionage is full of intrigue, failures and triumphs—and motives honorable and corrupt. Several notorious spies became household names—Aldrich Ames, Robert Hanssen, the Walkers, the Rosenbergs—and were the subjects of major motion pictures and television series. Many others have received less attention. This book summarizes hundreds of cases of espionage for and against U.S. interests and offers suggestions for further reading. Milestones in the history of American counterintelligence are noted. Charts describe the motivations of traitors, American targets of foreign intelligence services and American traitors and their foreign handlers. A former member of the U.S. intelligence community, the author discusses trends in intelligence gathering and what the future may hold. An annotated bibliography is provided, written by Hayden Peake, curator of the Historical Intelligence Collection of the Central Intelligence Agency.

The Best Class You Never Taught Alexis Wiggins 2017-09-27 The best classes have a life of their own, powered by student-led conversations that explore texts, ideas, and essential questions. In these classes, the teacher's role shifts from star player to observer and coach as the students think critically, work collaboratively, participate fully, behave ethically, ask and answer high-level questions, support their ideas with evidence, and evaluate and assess their own work. The Spider Web Discussion is a simple technique that puts this kind of class within every teacher's reach. The name comes from the weblike diagram the observer makes to record interactions as students actively participate in the discussion, lead and support one another's learning, and build community. It's proven to work across all subject areas and with all ages, and you only need a little know-how, a rubric, and paper and pencil to get started. As students practice Spider Web Discussion, they become stronger communicators, more empathetic teammates, better problem solvers, and more independent learners—college and career ready skills that serve them well in the classroom and beyond. Educator Alexis Wiggins provides a step-by-step guide for the implementation of Spider Web Discussion, covering everything from introducing the technique to creating rubrics for discussion self-assessment to the nuts-and-bolts of charting the conversations and using the data collected for formative assessment. She also shares troubleshooting tips, ideas for assessment and group grading, and the experiences of real teachers and students who use the technique to develop and share content knowledge in a way that's both revolutionary and truly inspiring.

Teaching Undergraduate Science Linda C. Hodges 2015-08-18 This book is written for science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students' lack of engagement and learning. The author, an experienced scientist, faculty member, and educational consultant, addresses these issues with the knowledge of faculty interests, constraints, and day-to-day concerns in mind. Drawing from the research on learning, she offers faculty new ways to think about the struggles their science students face. She then provides a range of evidence-based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying. Linda Hodges reviews the various learning problems endemic to teaching science, explains why they are so common and persistent, and presents a digest of key ideas and strategies to address them, based on the research she has undertaken into the literature on the cognitive sciences and education. Recognizing that faculty have different views about teaching, different comfort levels with alternative teaching approaches, and are often pressed for time, Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices, and then providing a range of strategies to address very specific teaching barriers – whether it be students' motivation, engagement in class, ability to problem solve, their reading comprehension, or laboratory, research or writing skills. Except for the first and last chapters, the other chapters in this book stand on their own (i.e., can be read in any order) and address a specific challenge students have in learning and doing science. Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement. Some, for example, can work in a large lecture class without a great expenditure of time; others may require more preparation and a more adventurous approach to teaching. Each strategy is accompanied by a table categorizing its likely impact, how much time it will take in class or out, and how difficult it will be to implement. Like scientific research, teaching works best when faculty start with a goal in mind, plan an approach building on the literature, use well-tested methodologies, and analyze results for future trials. Linda Hodges' message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities, whether those students are potential scientists or physicians or entrepreneurs. Her book serves as a mini compendium of current research as well as a protocol manual: a readily accessible guide to the literature, the best practices known to date, and a framework for thinking about teaching.

Technologies in Biomedical and Life Sciences Education Harry J. Witche 2022-06-24 This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content (including media as a learning supplement), in comparison to traditional face-to-face learning. Each chapter includes research on, and a broad-brush summary of, approaches to combining life sciences education with educational technologies. The chapters are organized into four main sections, each of which focuses on a key question regarding the consequences of incorporating media into education. In this regard, the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity. Further, they address the ongoing discussion as to whether students need to be present for lectures, and on how having agency in their own learning can improve both retention and conceptual understanding. To link the content to current events, the authors also shed light on the impact that the COVID-19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies. Consequently, the book offers life science educators valuable guidance on the technologies already available, and an outlook on what is yet to come.

Disasters, Risks and Revelation Steve Matthewman 2016-04-29 Disasters are part of the modern condition, a source of physical anxiety and existential angst, and they are increasing in frequency, cost and severity. Drawing on both disaster research and social theory, this book offers a critical examination of their causes, consequences and future avoidance.

Trivium 21c Martin Robinson 2013-06-15 Education policy and practice is a battleground between sworn enemies. Traditionalists argue for the importance of a privileged type of 'hard' knowledge and deride 'soft' skills. Progressives deride learning about great works of the past; preferring '21stC skills' like critical thinking, and teamwork. Whilst looking for a school for his daughter, the author became frustrated by schools' inability to value knowledge, as well as creativity, foster discipline alongside free-thinking, and value citizenship alongside independent learning. Drawing from his work as a creative teacher Robinson finds inspiration in the Arts and the need to nurture learners with the ability to deal with the uncertainties of our age. From Ancient Greece to the present day, this book explores whether a contemporary trivium (Grammar, Dialectic, and Rhetoric) can unite progressive and traditionalist institutions, teachers, politicians and parents in the common pursuit of providing a great education for our children in 21st Century.

The Ideas Industry Daniel Drezner 2017-03-01 The public intellectual, as a person and ideal, has a long and storied history. Writing in venues like the New Republic and Commentary, such intellectuals were always expected to opine on a broad array of topics, from foreign policy to literature to economics. Yet in recent years a new kind of thinker has supplanted that archetype: the thought leader. Equipped with one big idea, thought leaders focus their energies on TED talks rather than highbrow periodicals. How did this shift happen? In The Ideas Industry, Daniel W. Drezner points to the roles of political polarization, heightened inequality, and eroding trust in authority as ushering in the change. In contrast to public intellectuals, thought leaders gain fame as single-idea merchants. Their ideas are often laudable and highly ambitious: ending global poverty by 2025, for example. But instead of a class composed of university professors and freelance intellectuals debating in highbrow magazines, thought leaders often work through institutions that are closed to the public. They are more immune to criticism—and in this century, the criticism of public intellectuals also counts for less. Three equally important factors that have reshaped the world of ideas have been waning trust in expertise, increasing political polarization and plutocracy. The erosion of trust has lowered the barriers to entry in the marketplace of ideas. Thought leaders don't need doctorates or fellowships to advance their arguments. Polarization is hardly a new phenomenon in the world of ideas, but in contrast to their predecessors, today's intellectuals are more likely to enjoy the support of ideologically friendly private funders and be housed in ideologically-driven think tanks. Increasing inequality as a key driver of this shift: more than ever before, contemporary plutocrats fund intellectuals and idea factories that generate arguments that align with their own. But, while there are certainly some downsides to the contemporary ideas industry, Drezner argues that it is very good at broadcasting ideas widely and reaching large audiences of people hungry for new thinking. Both fair-minded and trenchant, The Ideas Industry will reshape our understanding of contemporary public intellectual life in America and the West.

Educating Generation Next Lucas Walsh 2016-01-26 Is the current industrial model of schooling capable of preparing young people for modern working life? This book provides an unsettling picture of the challenges young people face following the uncertainty of the Global Financial Crisis. It asks whether teachers and schooling are able to provide the skills needed in a contemporary global economy.

Workshop Proceedings of the 9th International Conference on Intelligent Environments SA. Botia 2013-07-26 Intelligent Environments (IE) play an increasingly important role in many areas of our lives, including education, healthcare and the domestic environment. The term refers to physical spaces incorporating pervasive computing technology used to achieve specific goals for the user, the environment or both. This book presents the proceedings of the workshops of the 9th International Conference on Intelligent Environments (IE '13), held in Athens, Greece, in July 2013. The workshops which were presented in the context of this conference range from regular lectures to practical sessions. They provide a forum for scientists, researchers and engineers from both industry and academia to engage in discussions on newly emerging or rapidly evolving topics in the field. Topics covered in the workshops include artificial intelligence techniques for ambient intelligence; applications of affective computing in intelligent environments; smart offices and other workplaces; intelligent environment technology in education for creative learning; museums as intelligent environments; the application of intelligent environment technologies in the urban context for creating more sociable, intelligent cities and for constructing urban intelligence. IE can enrich user experience, better manage the environment's resources, and increase user awareness of that environment. This book will be of interest to all those whose work involves the application of intelligent environments.

Vocation across the Academy David S. Cunningham 2017-01-11 Although the language of vocation was born in a religious context, the contributors in this volume demonstrate that it has now taken root within the broad framework of higher education and has become intertwined with a wide range of concerns. This volume makes a compelling case for vocational reflection and discernment in undergraduate education today, arguing that it will encourage faculty and students alike to venture out of their narrow disciplinary specializations and to reflect on larger questions of meaning and purpose. In conversation with a growing range of scholarly resources, these essays advance the cause of vocational reflection and discernment well beyond its occasional mention in general education courses and career placement offices. The book's thirteen contributors all work in higher education, but they do so as biologists and musicians, sociologists and engineers, doctors and lawyers, college presidents and deans, and scholars of history, literature, and business administration. Together, they demonstrate that vocation has an important role to play across the entire range of traditional academic disciplines and applied fields. Regardless of major, all undergraduates need to consider their current and future responsibilities, determine the stories they will live by, and discover resources for addressing the tensions that will inevitably arise among their multiple callings. Vocation across the Academy will help to reframe current debates about the purpose of higher education. It underscores the important role that colleges and universities can play in encouraging students to reflect more deeply on life's most persistent questions and to consider how they might best contribute to the common good.

Sun Ra's Chicago, William Sites 2021-01-11 Sun Ra (1914-93) was one of the most wildly prolific and unfailingly eccentric figures in the history of music. Renowned for extravagant performances in which his Arkestra appeared in neo-Egyptian garb, the keyboardist and bandleader also espoused an interstellar cosmology that claimed the planet Saturn as his true home. In Sun Ra's Chicago, William Sites brings this visionary musician back to earth—specifically to the city's South Side, where from 1946 to 1961 he lived and relaunched his career. The postwar South Side was a hotbed of unorthodox religious and cultural activism: Afrocentric philosophies flourished, storefront prophets

sold "dream-book bibles," and Elijah Muhammad was building the Nation of Islam. It was also an unruly musical crossroads where the man then known as Sonny Blount drew from an array of intellectual and musical sources—from radical nationalism, revisionist Christianity, and science fiction to jazz, blues, Latin dance music, and pop exotica—to construct a philosophy and performance style that imagined a new identity and future for African Americans. Sun Ra's Chicago shows that late twentieth-century Afrofuturism emerged from a deep, utopian engagement with the city—and that by excavating the postwar black experience of Sun Ra's South Side milieu, we can come to see the possibilities of urban life in new ways.

End Times Bryan Walsh 2019-08-27 In this history of extinction and existential risk, a Newsweek and Bloomberg popular science and investigative journalist examines our most dangerous mistakes -- and explores how we can protect and future-proof our civilization. End Times is a compelling work of skilled reportage that peels back the layers of complexity around the unthinkable -- and inevitable -- end of humankind. From asteroids and artificial intelligence to volcanic supereruption to nuclear war, veteran science reporter and TIME editor Bryan Walsh provides a stunning panoramic view of the most catastrophic threats to the human race. In End Times, Walsh examines threats that emerge from nature and those of our own making: asteroids, supervolcanoes, nuclear war, climate change, disease pandemics, biotechnology, artificial intelligence, and extraterrestrial intelligence. Walsh details the true probability of these world-ending catastrophes, the impact on our lives were they to happen, and the best strategies for saving ourselves, all pulled from his rigorous and deeply thoughtful reporting and research. Walsh goes into the room with the men and women whose job it is to imagine the unimaginable. He includes interviews with those on the front lines of prevention, actively working to head off existential threats in biotechnology labs and government hubs. Guided by Walsh's evocative, page-turning prose, we follow scientific stars like the asteroid hunters at NASA and the disease detectives on the trail of the next killer virus. Walsh explores the danger of apocalypse in all forms. In the end, it will be the depth of our knowledge, the height of our imagination, and our sheer will to survive that will decide the future.

Math and Science for Young Children Rosalind Charlesworth 2015-01-19 MATH AND SCIENCE FOR YOUNG CHILDREN, Eighth Edition, introduces readers to engaging math and science experiences for early childhood and early elementary education programs, and provides an organized, sequential approach to creating a developmentally appropriate math and science curriculum. The content aligns with key guidelines and standards: The National Association for the Education of Young Children's (NAEYC) Professional Preparation Standards (2010); Developmentally Appropriate Practice (DAP) guidelines; Common Core Mathematics Standards; and Next Generation Science Standards (NGSS). The book also addresses STEM/STEAM and the essential domains of child growth and development during the crucial birth-through-eight age range. A valuable resource for the student/future teacher, working professional, or involved parent, MATH AND SCIENCE FOR YOUNG CHILDREN emphasizes the interrelatedness of math and science and how they can be integrated into all other curriculum areas. Mediated Kinship Rikke Andreassen 2018-08-22 Illustrating the fascinating intersections of online media and new kinship, this book presents a study of the increasing numbers of single women and lesbian couples reproducing by using donor sperm. It explores how they connect with each other online, develop intimate digital communities and, most importantly, locate their children's hitherto unknown biological half-siblings, throughout the world. The author discusses how these new families - consisting of only mothers - engage in extended families involving large numbers of 'donor siblings'. The new families challenge previous understandings of kinship, and provide illustrations of how norms of gender, sexuality and family are challenged, negotiated and maintained in contemporary times. A crucial study of contemporary formations of family, gender and race, Mediated Kinship discusses the racial aspects of the world's largest sperm bank exporting Danish sperm (termed 'Viking sperm'), and explores the narratives of whiteness and imagined racial superiority that circulate among mothers, as well as the racialisations accompanying commercial online sperm sales. By analysing contemporary families of donor-conceived children in the context of legislation, reproduction technologies and online media, the book will appeal to scholars across the social sciences with interests in race and ethnicity, whiteness, gender, sexuality, kinship and the sociology of the family.

The Thika Highway Improvement Project Renard Teipelke 2013-12-04 Theory and practice of high-capacity infrastructure projects are the major focus in the development of countries in the Global South. Aiming at a more fine-grained understanding of such projects, Renard Teipelke studies the Thika Highway Improvement Project (THIP) and its outcomes in the peri-urban Northern Nairobi Metropolitan Region. The THIP is a large transportation infrastructure project that expanded the dual carriageway Thika Road into an eight-lane highway from 2008 until 2012. Based on a strategic mix of methodological approaches, such as interviews with experts in Kenya, literature research and field visits, the 'black box' THIP is opened up. In the empirical analysis, the project's idea, its design, and its implementation are studied. It is concluded that the project's outcomes are ambivalent - partly living up to the expectations of THIP proponents but not resulting in shared benefits for all concerned stakeholders due to flaws in managing the development in this peri-urban transport corridor area, thereby fitting into the Kenyan context of politics and planning.

Social Sciences Kath Woodward 2021-12-31 Fully revised and updated, the fourth edition of Social Sciences: The Big Issues explores key debates about how we live our personal, domestic and emotional lives at a time of enormous, previously unimaginable change and disruption, including a pandemic that locked down households and economies. Since the third edition, everyone's life has changed. The pandemic – at least temporarily – stopped social life as we knew it and virtually forced governments to close down their economies. This is where this edition of The Big Issues starts. Staying at home posed a radical departure from routine life, but reactions to Covid-19 have exposed the endurance of particular social relations – especially inequalities – which characterize societies worldwide. A few of the new big issues covered in this edition include: Changing selves and personal lives in light of racism and sexual and identity politics in a pandemic Changing patterns of consumption in relation to market production and what it means for climate change Changing intersections of citizenship, migration and globalization in the context of the virus crossing borders, and both the opportunities and sources of inequality involved Changing ideas about power, politics and populism in the aftermath of Brexit Building on the strong foundation of this well-loved text, this fully revised fourth edition explores how big issues and social forces intersect to create both change and evidence of continuity, especially of social inequalities. It provides a clear, accessible introduction to the ideas and approaches of the social sciences across a range of disciplines, including sociology, psychology and politics.
