[MACBOOK PRO \(With M1 Chip\) USER GUIDE](#) Tom O Hank 2021-01-16 The best and easiest way to think about the new entry-level MacBook Pro is that it is a fan-cooled MacBook Air. The fan is the utmost distinguished difference between Apple's two new laptops, which are based on their M1 chip. The new Air without a fan has to lose performance with increasing temperatures. The Pro can simply turn the fan on, which means that performance can be sustained for a much longer period. Sure, there are a few minor differences - the Pro has a slightly better screen, better microphones, and louder speakers. It has a larger battery and therefore slightly longer battery life. And yes, it has the desperately confusing Touch Bar instead of a bunch of functions on the keyboard. However, in terms of performance, it is essentially the same as the air unless you press it for long periods. And it all depends on the fan. For some people, that small performance advantage is worth the price hike over the air. The entry-level Pro for \$1,299 with an 8-core GPU, 8GB of RAM, and 256GB of storage cost \$300 more than the base Air, while the high-end configuration with 512GB of storage is \$1,499, \$250 more than a similar model - equipped with air. However, compared to the latest version of this model that was tested in 2019, the new model doesn't worry about its keyboard, great battery life, and even better performance. It's an improvement in all aspects. There are many technical details about the M1, how it handles running applications for Intel chips, and what tells us about the future of the Mac. The short answer is that it is very impressive and the MacBook Pro is an excellent laptop with great performance and impressive battery life. But if you're excited about buying a new Mac M1, is it worth the extra cash on Air? The long answer is straightforward ... maybe. This book will tell you everything you want to know about the redesigned MacBook pro. Here's an overview of what you'll find in this book Features of the m1 chip MacBook pro Setting up Apple Pay in Safari on Mac Best ways to backup Mac How to change your Apple ID How to Customize the Finder Toolbar How to Use Tags Troubleshooting macOS big sur and how to fix them And lots more Scroll up and click the BUY NOW icon to get this book now

100 Things Every Mac User Should Know (Macworld Superguides) We all like to think we're pretty savvy when it comes to using our Macs. In the case of the typical Macworld reader, that's usually true. (You're all unusually handsome and have wonderful singing voices too.) But there's a funny thing we've noticed when we talk to Mac users, even the supposedly savvy ones: There's often some essential information — basic things that would make their Mac use easier or more efficient — that they've either forgotten or never learned. So we got some Macworld editors and contributors together and asked ourselves: What are the things that every Mac user should know how to do? We didn't meant the really basic stuff -Command-C, Command-V, and so on - but the skills and knowledge that mark you as Mac-literate. And we came up with a list of 100 things that seemed to fit that bill. They range from customizing your Mac's boot-up sequence to shutting down unresponsive apps. In between, they cover Finder navigation, launching apps, keyboard shortcuts, Spotlight, PDFs, user accounts, and much, much more. (Our one rule: None of these things could require third-party tools; we're talking only about stuff you can do with OS X itself.)
